CONFERENCE OBJECTIVES – This forty-fifth annual course is designed to provide the practitioner with state-of-the-art information regarding the pathogenesis and treatment of a variety of disease states. Recognized quest lecturers and members of our own faculty will give sharply focused clinically oriented talks on a range of topics. Upon completion of the course participants should be able to:

- Discuss current concepts regarding mortality risks and the nature of symptom burden and its alleviation in dialysis patients.
- Review the proper management of CKD and ESRD patients with Hepatitis C and those who require anticoagulation.
- Identify new therapies that are emerging for the treatment of various forms of glomerulonephritis and our current understanding of the role of the kidney biopsy in diagnosing and prognosticating the course of lupus nephritis.
- Outline strategies for optimizing the evaluation for and outcomes of living kidney donation.
- Evaluate the clinical utility of routine monitoring for the formation of donor specific antibodies after kidney transplantation.
- Summarize the results of key literature articles of the past year in the areas of CKD and dialysis, glomerulonephritis, and transplantation and be prepared to implement this knowledge in clinical practice.
